ABOUT

Hello and good day,

My name is Alireza Ebadi. I'm 21 years old and currently based in Tehran. I have been programming for 4 years, beginning with front-end development where I gained strong skills in JavaScript and TypeScript. Over time, I became proficient with various JavaScript frameworks and libraries including React.js, Next.js, Redux, Redux Toolkit, React Query, SWR, and i18n.

After spending three and a half years focused on front-end development—continuously learning and improving—I decided to expand my knowledge into back-end development. I started working with Node.js, Express, and MongoDB (NoSQL), and I am currently gaining hands-on experience in this area.

In summary, I am a reliable and detail-oriented front-end developer, and a junior back-end developer actively developing my skills. One of my key strengths is my commitment to continuous learning—I stay up to date with new technologies and advancements on a daily basis.

Thank you for your time and consideration.

SKILLS

`Html/Css` `Sass` `Bootstrap` `Material Ui` `Tailwind Css` `JavaScript` `TypeScript`

`React` `Redux` `Redux-toolkit` `Next Js` `Node Js` `Express` `Mongodb` `Docker`

`github / Git` `Rest Api` `PostMan/Swagger` `Jira` `PWA` `Vite` `HookForm` `Leaflat`

`MapBox` `WebSocket` `gRPC` `C++`

EXPERIENCE

Mahde Tose Fanavary alav(Matfa)
https://matfagroup.ir/

May 2024-Present

The company Mahde Tose Fanavary Alav (Matfa) was a knowledge-based company working on two main projects: a native messaging app and a mission planner project, both of which I contributed to. The messaging app was a localized version of Telegram and WhatsApp, utilizing technologies like WebSocket and gRPC. The mission planner project employed a fully customized version of React Leaflet, along with Socket and gRPC technologies. For authentication, both projects used the refresh token model.

Noavaran faradid/OverC - Mernstack Developer
https://overc.io/   https://piticoapp.com/

May 2023 - May 2024

The Pitico project was a super app consisting of five websites, each serving different functions. These websites included seller, user, referee-competition, user-competition, and Pitico. I was responsible for the complete development of these projects, often coding as the team lead

SarzaminHooshmand - Front End Developer
https://sarzaminhooshmand.com/   https://nahalit.com/

May 2022 - May 2023

SarzaminHooshmandCo was a project-based company that worked with clients. My responsibility there was as the React team leader, where I handled React projects, including the NahalIT project.

Kikavuszaman

May 2020 - May 2022

Kikavous Zaman was a company where I initially joined as an intern, but due to my higher skill level, I started working on projects with my colleagues and the company itself. My work there resulted in the completion of the internship and the development of at least three e-commerce websites and one blog website.
